 Turning Summer into Fall

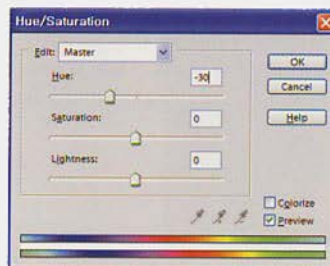

Every season has its representative colors—but to me, fall is the most colorful and most beautiful season. In this section, you will learn how to turn green summer leaves into reddish or yellowish autumn colors.

- 1 Select [Image]-[Adjustments]-[Hue/Saturation] from the menu bar.

The Hue/Saturation dialog box appears.

- 2 Change the Hue setting to -30.

- 5 Click OK.

The overall image now has a brownish tone.

- 6 Select the Lasso Tool () from the toolbox.

- 5 In the options bar, set Feather to **20 pixels**.

- 6 Click and drag over a bunch of leaves on the left side of the image to select them.

 To soften the edges of the selection border, always set a Feather value greater than 0 before changing the color. The greater the Feather value, the fuzzier the edges. A Feather value of 0 will give the selection border an abrupt edge.

- 7 Click the Add to Selection icon () in the options bar.

- 8 Click and drag the tool over the leaves on the right side of the image to add them to the selection.

- 9 Press **Ctrl** + **U** or select [Image]-[Adjustments]-[Hue/Saturation] from the menu bar.

The Hue/Saturation dialog box appears.

- 10 Set Hue to **-55** and Saturation to **+25**.

- 11 Click OK.

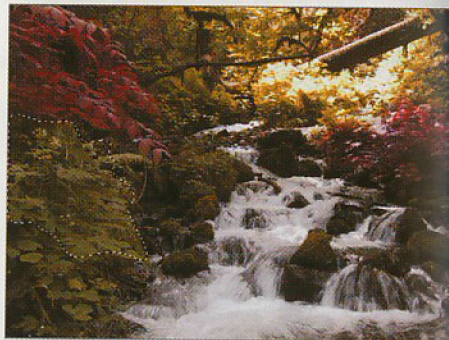

This changes the colors of the leaves to a warm autumn red.

- 12 In the options bar of the Lasso Tool () , click on the New Selection icon ().

- 13 Select the leaves on the left side of the image, as shown.

- 14 Click on the Add to Selection icon () in the options bar.

- 15 Click and drag the tool over the other two areas, as shown.

- 16 Press **Ctrl** + **U** or select [Image]-[Adjustments]-[Hue/Saturation] from the menu bar.

The Hue/Saturation dialog box appears.

- 17 Set Saturation to **+65**.

- 18 Click **OK**.

This turns the selected areas yellow.

- 19 In the options bar of the Lasso Tool () , select **New Selection** () .

- 20 Select the leaves in the lower-left corner.

- 21 Open the Hue/Saturation dialog box. Set Hue to **-70**.

- 22 Click **OK**. Press **Ctrl** + **D** to deselect.

This turns the selected leaves slightly purplish.
